

ACKNOWLEDGEMENTS

Never-ending appreciation and praises are due to almighty ‘Allah (SWT)’ for conceding the author sound health, energy and blessing to complete the research work leading to Ph D degree in due time.

The author expresses his sincerest appreciation, immense indebtedness and regards to his reverend teacher and Supervisor **Professor. Dr. Md. Shafiqul Islam Sikdar**, Department of Agronomy, Hajee Mohammad Danesh Science and Technology University (HSTU), Dinajpur for his steady counseling, scholastic guidance, fruitful criticism, constructive suggestions, constant inspiration and time to time supervision in all phases of this investigation including script preparation for this dissertation.

The author acknowledges his gratitude, appreciation and indebtedness to his Co-Supervisor, **Professor Dr. Md. Abdul Kader**, Department of Agronomy, Bangladesh Agricultural University (BAU), Mymensingh for his valuable suggestions, constructive criticisms and scholastic supervision in completing the research work and in improving the manuscript.

The author sincerely expresses his profound respect and gratitude to **Dr. Md. Imtiaz Uddin**, Member, Supervisory Committee and Chief Scientific Officer, Biotechnology Division, Bangladesh Institute of Nuclear Agriculture (BINA), Mymensingh for his patient co-operation, precious suggestions and encouragement during the entire period of experimentation and in preparation of this manuscript.

The author also expresses his deepest gratitude to his respected teachers of the Department of Agronomy, HSTU, Dinajpur for their valuable co-operation and advice.

The author is highly thankful to the Head, Department of Agricultural Chemistry, HSTU, Dinajpur for providing facilities for chemical analysis of the plant samples. The author acknowledges the technical assistance of Md. Abdul Wadud, Laboratory Technician of the same department.

The author wishes to express special thanks to Dr. S. H. M. Golam Sarwar, Deputy Farm Super, Hajee Mohammad Danesh Science and Technology University, Dinajpur for his enormous help during the research. The author gratefully acknowledges the

cordial help and sincere cooperation offered by Dr. Mohammad Monjur Hossain, Department of Agronomy, BAU for allelic diversity analysis of wild rice accession conferring salinity tolerance.

The author wishes to express special thanks to all the office staffs, Department of Agronomy, HSTU Dinajpur for their help concerning sample collection, data recording and biochemical analysis of experimental plants during the research.

The author expresses his deepest gratitude to the authority of Department of Agricultural Extension for giving opportunity completing the Ph D program.

The author is highly thankful to the Laboratory, Biotechnology Division, Bangladesh Institute of Nuclear Agriculture (BINA), Mymensingh-2202 for their enormous lab support.

The author is highly thankful to Soil Resource Development Institute (SRDI), Nashipur, Dinajpur for their enormous support to analysis the soil samples.

The author is always grateful to his beloved family members for their blessings, infinite tolerance, support and sacrifice for the cause of this study.

The author finally expresses his cordial thanks to his wife **Umme Habiba Begum**, Senior Teacher, Dinajpur Zilla School for her continuous encouragement, enormous helps and sacrifices during the whole study period.

The author expresses his deep affection to his lovely sons **Niloy** and **Nilav** for their untold sacrifices during inordinate absence from home during the period of this study.

The Author

BIOGRAPHICAL SKETCH

The author was born on 15 May, 1969 in Zinor, Muraripur, Bochaganj, Dinajpur, Bangladesh. He is son of Hakimuddin Ahamed and Nomiza Begum. He completed his Secondary School Certificate (SSC) education in 1984 from Setabganj Pilot Government High School and Higher Secondary Certificate (HSC) education in 1986 from Dinajpur Government College under Board of Intermediate and Secondary Education, Rajshahi. He obtained his B. Sc. Ag. (Hons.) Degree in 1991(Held in 1995) from Bangladesh Agricultural University, Mymensingh and his Master of Science (M.S) in Agronomy from the same University in 1997.

He joined at Rangpur Dinajpur Rural Service (RDRS) as Extension Officer (Crop) in April, 1998. He joined at the Department of Agriculture Extension (DAE) as Agriculture Extension Officer On 31 May 2001. He was promoted as Additional Agriculture Officer in 2008. Next he was promoted as Upozilla Agriculture Officer in August, 2010. Then he was promoted as Deputy Director, Horticulture Wing, Department of Agriculture Extension (DAE). He is a Life Member of Bangladesh Agronomy Society and General Member of Krishibid Institution of Bangladesh. He has three research publications in national and international journals.

He is married to Umme Habiba Begum and blessed with two sons Niloy and Nilav.

MD. AZAMUL HAQUE

MORPHO-PHYSIOLOGICAL CHARACTERIZATION OF WILD RELATIVES OF RICE CONFERRING TOLERANCE TO SALINITY AND DROUGHT

Abstract

Varietal breakthrough in rice contributed very significantly to the increased rice production in Bangladesh over the years despite of many challenges including abiotic stresses like salinity and drought. However, the recent trend shows a yield ceiling of the varietal improvement of rice, especially under stress condition. The use of untapped resources of wild species of rice against biotic and abiotic stresses is still largely unexplored under Bangladesh context. This study evaluated 40 accessions of wild species of rice through assessing their morpho-physiological behaviors and allelic diversity conferring tolerance to salinity and drought stresses. The whole work consisted of four pot experiments and one laboratory experiment conducted during 2018-2020. In the 1st pot experiment 40 accessions under 10 wild species of rice namely *Oryza rufipogon*, *O. alta*, *O. nivara*, *O. latifolia*, *Poterecia coarctata*, *O. glaberrima*, *O. longistaminata*, *O. officinalis*, *O. punctata* and *O. barthii* were tested to assess their morpho-physiology and yield performance under normal environment where all the accessions showed variable morpho-physiological and yield performances. Based on their morpho-physiological parameters the accessions were distributed into five clusters where cluster IV included the maximum number of accessions (17) followed by clusters III (11), cluster II (5), cluster V (4) and cluster I (3). The principal component analysis (PCA) clearly and concisely explains the genetic diversity of wild rice genotypes. Based on the cluster grouping ten accessions from the ten wild species were further evaluated in the 2nd experiment under normal condition and their morpho-physiological features were identified. The results summarized that the wild rice genotypes exerted fluctuating result for different morpho-physiological traits. The maximum grain yield hill⁻¹ (101.90 g) was distinctly produced by wild rice genotype *O. nivara* and the minimum grain yield hill⁻¹ (9.00 g) was produced by wild rice genotype *O. latifolia*. In the 3rd pot experiment the performance of these ten wild species of rice along with two checks FR13A (check variety as drought tolerant) and BRRI dhan29 (check variety as drought sensitive) were evaluated under drought condition of 40-45 % field capacity. Among the tested genotypes *O. punctata* and *O. barthii* showed more susceptibility under drought stress. On the other hand, *O. latifolia*, *O. nivara*, *Poterecia coaractata*, *O. officinalis* and FR13A showed more tolerance capability against drought stress. The 4th experiment was comprised of two factors: 12 rice genotypes (10 wild rice genotypes along with two checks Pokkali as salinity tolerant and BRRI Dhan 29 as salinity sensitive) and 3 salinity levels viz. 0 mM NaCl, 50 mM NaCl and 100 mM NaCl. *Potericia coaractata* and *O. latifolia* showed the most tolerance among all the wild rice genotypes used. The allelic diversity analysis of the 10 wild species of rice concludes that the polymorphism information content (PIC) value of each primer pair ranged from 0.16 (*O. rufipogon*) to 0.37 (*O. alta*, *O. latifolia*, *O. officinalis*, *Portericia coactata* and *O. nivara*) with an average of 0.31. The results reveal that *O. alta*, *O. latifolia*, *O. officinalis*, *Portericia coactata* and *O. nivara* would be the best salt tolerant wild rice genotypes among 12 wild rice genotypes used in the study. The identified traits of the wild species of rice for salinity and drought tolerance would be a valuable resource for their introgression into the modern rice cultivars for future breeding programs to develop salinity and drought tolerant rice cultivars.

4.3.39	Tillers hill ⁻¹ of wild species of rice as influenced by drought stress	223
4.3.40	Effective tillers hill ⁻¹ of wild species of rice as influenced by drought stress	225
4.3.41	Non-effective tillers hill ⁻¹ of wild species of rice as influenced by drought stress	227
4.3.42	Panicle length of wild species of rice as influenced by drought stress	229
4.3.43	Interaction effect of species and drought stress on the grains of wild species of rice	232
4.3.44	Grains panicle ⁻¹ of wild species of rice as influenced by drought stress	233
4.3.45	Filled grains panicle ⁻¹ of wild species of rice as influenced by drought stress	235
4.3.46	Unfilled grains panicle ⁻¹ of wild species of rice as influenced by drought stress	238
4.3.47	Grain fertility percentage of wild species of rice as influenced by drought stress	240
4.3.48	Grain sterility percentage of wild species of rice as influenced by drought stress	242
4.3.49	Interaction effect of species and drought stress on the yield and yield contributing characteristics of wild species of rice	246
4.3.50	Thousand grain weight of wild species of rice as influenced by drought stress	248
4.3.51	Grain yield hill ⁻¹ of wild species of rice as influenced by drought stress	252
4.3.52	Biological yield hill ⁻¹ of wild species of rice as influenced by drought stress	254
4.3.53	Harvest index of wild species of rice as influenced by drought stress	257

LIST OF TABLES (Cont'd)

TABLE NO.	TITLE	PAGE NO.
4.4.1	Effect of species and salinity level on the morphological characteristics of wild rice	260
4.4.2	Interaction effect of species and salinity level on the morphological characteristics of wild rice	261
4.4.3	Plant height of wild species of rice as influenced by salinity stress	262
4.4.4	Leaves plant ⁻¹ of wild species of rice as influenced by salinity stress	263
4.4.5	Nodes plant ⁻¹ of wild species of rice as influenced by salinity stress	265
4.4.6	Days required to 1 st flowering of wild species of rice as influenced by salinity stress	266
4.4.7	Growth duration of wild species of rice as influenced by salinity stress	268
4.4.8	Effect of species and salinity level on normal leaf characteristics of wild species of rice	269
4.4.9	Interaction effect of species and salinity level on the morphological characteristics of wild rice	270
4.4.10	Normal leaf length of wild species of rice as influenced by salinity stress	271
4.4.11	Normal leaf breadth of wild species of rice as influenced by salinity stress	272
4.4.12	Normal leaf ratio of wild species of rice as influenced by salinity stress	274
4.4.13	Normal leaf area of wild species of rice as influenced by salinity stress	275
4.4.14	Effect of species and salinity level on the morphological characteristics of wild rice	276
4.4.15	Interaction effect of species and salinity level on the morphological characteristics of wild rice	278

LIST OF TABLES (Cont'd)

TABLE NO.	TITLE	PAGE NO.
4.4.16	Flag leaf length of wild species of rice as influenced by salinity stress	279
4.4.17	Flag leaf breadth of wild species of rice as influenced by salinity stress	280
4.4.18	Flag leaf ratio of wild species of rice as influenced by salinity stress	281
4.4.19	Flag leaf area of wild species of rice as influenced by salinity stress	282
4.4.20	Effect of species and salinity level on the morphological characteristics of wild rice	284
4.4.21	Interaction effect of species and salinity level on the morphological characteristics of wild rice	285
4.4.22	Root length of wild species of rice as influenced by salinity stress	286
4.4.23	Shoot dry weight hill ⁻¹ of wild species of rice as influenced by salinity stress	288
4.4.24	Root dry weight hill ⁻¹ of wild species of rice as influenced by salinity stress	289
4.4.25	Total dry weight hill ⁻¹ of wild species of rice as influenced by salinity stress	291
4.4.26	Effect of species and salinity level on the physiological characteristics of wild species of rice	294
4.4.27	Interaction effect of species and salinity level on the physiological characteristics of wild species of rice	295
4.4.28	Chlorophyll a content on leaf of wild species of rice as influenced by salinity stress	296
4.4.29	Chlorophyll b content on leaf of wild species of rice as influenced by salinity stress	298
4.4.30	Carotenoid content on leaf of wild species of rice as influenced by salinity stress	300

LIST OF TABLES (Cont'd)

TABLE NO.	TITLE	PAGE NO.
4.4.31	Proline content of wild species of rice as influenced by salinity stress	303
4.4.32	Effect of species and salinity level on the water relation behavior of wild species of rice	305
4.4.33	Interaction effect of species and salinity level on the water relation behavior of wild species of rice	306
4.4.34	Relative water content of wild species of rice as influenced by salinity stress	307
4.3.35	Water saturation deficit of wild species of rice as influenced by salinity stress	308
4.4.36	Water retention capacity of wild species of rice as influenced by salinity stress	310
4.4.37	Water uptake capacity of wild species of rice as influenced by salinity stress	312
4.4.38	Plant survival rate under salinity stress condition	313
4.4.39	Phenotypic acceptability (PAcp) of studied wild rice species of rice with two check varieties at 50 and 100 mM NaCl concentration	314
4.4.40	Interaction effect of species and salinity level on the morphological characteristics of wild rice	317
4.4.41	Tillers hill ⁻¹ of wild species of rice as influenced by salinity stress	318
4.4.42	Effective tillers hill ⁻¹ of wild species of rice as influenced by salinity stress	320
4.4.43	Non-effective tillers hill ⁻¹ of wild species of rice as influenced by salinity stress	323
4.4.44	Panicle length of wild species of rice as influenced by salinity stress	325
4.4.45	Interaction effect of species and salinity level on the yield contributing characteristics of wild rice	328

LIST OF TABLES (Cont'd)

TABLE NO.	TITLE	PAGE NO.
4.4.46	Grains panicle ⁻¹ of wild species of rice as influenced by salinity stress	329
4.4.47	Filled grains panicle ⁻¹ of wild species of rice as influenced by salinity stress	331
4.4.48	Unfilled grains panicle ⁻¹ of wild species of rice as influenced by salinity stress	333
4.4.49	Thousand grain weight of wild species of rice as influenced by salinity stress	336
4.4.50	Interaction effect of species and salinity level on the yield of wild species of rice	342
4.4.51	Grain yield hill ⁻¹ of wild species of rice as influenced by salinity stress	343
4.4.52	Biological yield hill ⁻¹ of wild species of rice as influenced by salinity stress	345
4.4.53	Harvest index of wild species of rice as influenced by salinity stress	347
4.5.1	Data of summary statistics of 12 wild rice genotypes for 6 microsatellites (SSR) markers	350
4.5.2	Genetic distance similarity among 12 wild rice genotypes obtained from microsatellite marker analysis	354
4.5.3	Genetic distance dissimilarity among 12 wild rice genotypes obtained from microsatellite marker analysis	354

LIST OF FIGURES

FIGURE NO.	TITLE	PAGE NO.
4.1.1	Cluster dendrogram showing contribution of various traits in variability among the rice genotypes	137
4.2.1	Tillers hill ⁻¹ of wild rice of rice	158
4.2.2	Effective tillers hill ⁻¹ of wild species of rice	159
4.2.3	Non-effective tillers hill ⁻¹ of wild species of rice	160
4.2.4	Panicle length of wild species of rice	161
4.2.5	Grains panicle ⁻¹ of wild species of rice	162
4.2.6	Filled grains panicle ⁻¹ of wild species of rice	163
4.2.7	Unfilled filled grains panicle ⁻¹ of wild species of rice	164
4.2.8	Thousand grain weight of wild species of rice	165
4.2.9	Grain yield hill ⁻¹ of wild rice	166
4.2.10	Biological yield hill ⁻¹ of wild species of rice	167
4.2.11	Harvest index of wild species of rice	168
4.3.1	Tillers hill ⁻¹ of wild species of rice	220
4.3.2	Effect of drought stress on the tillers hill ⁻¹ of wild species of rice	221
4.3.3	Effective tillers hill ⁻¹ of wild species of rice	224
4.3.4	Effect of drought stress on the effective tillers hill ⁻¹ of wild species of rice	224
4.3.5	Non-effective tillers hill ⁻¹ of wild species of rice	226
4.3.6	Effect of drought stress on the non-effective tillers hill ⁻¹ of wild species of rice	226
4.3.7	Panicle length of wild species of rice	228
4.3.8	Effect of drought stress on the panicle length of wild species of rice	228
4.3.9	Grains panicle ⁻¹ of wild species of rice	230
4.3.10	Effect of drought stress on the grains panicle ⁻¹ of wild species of rice	231
4.3.11	Filled grains panicle ⁻¹ of wild species of rice	234
4.3.12	Effect of drought stress on the filled grains panicle ⁻¹ of wild species of rice	234

LIST OF FIGURES (Cont'd)

FIGURE NO.	TITLE	PAGE NO.
4.3.13	Unfilled grains panicle ⁻¹ of wild species of rice	236
4.3.14	Effect of drought stress on the unfilled grains panicle ⁻¹ of wild species of rice	237
4.3.15	Grain fertility percentage of wild species of rice	239
4.3.16	Effect of drought stress on the grain fertility percentage of wild species of rice	239
4.3.17	Grain sterility percentage of wild species of rice	241
4.3.18	Effect of drought stress on the grain sterility percentage of wild species of rice	242
4.3.19	Thousand grain weight of wild species of rice	244
4.3.20	Effect of drought stress on the thousand grain weight of wild species of rice	245
4.3.21	Grain yield hill ⁻¹ of wild species of rice	248
4.3.22	Effect of drought stress on the grain yield hill ⁻¹ of wild species of rice	252
4.3.23	Biological yield hill ⁻¹ of wild species of rice	253
4.3.24	Effect of drought stress on the biological yield hill ⁻¹ of wild species of rice	254
4.3.25	Harvest index of wild species of rice	255
4.3.26	Effect of drought stress on the harvest index of wild species of rice	256
4.4.1	Tillers hill ⁻¹ of wild species of rice	315
4.4.2	Effect of salinity level on the tillers hill ⁻¹ of wild species of rice	316
4.4.3	Effective tillers hill ⁻¹ of wild species of rice	319
4.4.4	Effect of salinity level on the effective tillers hill ⁻¹ of wild species rice	319
4.4.5	Non-effective tillers hill ⁻¹ of wild species of rice	321
4.4.6	Effect of salinity level on the non-effective tillers hill ⁻¹ of wild species of rice	322
4.4.7	Panicle length of wild species of rice	323
4.4.8	Effect of salinity level on the panicle length of wild species of rice	324

LIST OF FIGURES (Cont'd)

FIGURE NO.	TITLE	PAGE NO.
4.4.9	Grains panicle ⁻¹ of wild species of rice	326
4.4.10	Effect of salinity level on the grains panicle ⁻¹ of wild species of rice	327
4.4.11	Filled grains panicle ⁻¹ of wild species of rice	329
4.4.12	Effect of salinity level on the filled grains panicle ⁻¹ of wild species of rice	330
4.4.13	Unfilled grains panicle ⁻¹ of wild species of rice	332
4.4.14	Effect of salinity level on the unfilled grains panicle ⁻¹ of wild species rice	333
4.4.15	Thousand grain weight of wild species of rice	334
4.4.16	Effect of salinity level on the thousand grain weight of wild species of rice	335
4.4.17	Grain yield hill ⁻¹ of wild species of rice	340
4.4.18	Effect of salinity level on the grain yield hill ⁻¹ of wild species of rice	341
4.4.19	Biological yield hill ⁻¹ of wild species of rice	343
4.4.20	Effect of salinity level on the biological yield hill ⁻¹ of wild species of rice	344
4.4.21	Harvest index of wild species of rice	346
4.4.22	Effect of salinity level on the harvest index of wild species of rice	346
4.5.1	Amplification profile of primer RM11 and RM25for each 12 wild rice genotypes in 1.0% agarose gel strained with ethidium bromide. Three micro liter of PCR product was used in each sample	351
4.5.2	Amplification profile of primer RM171 and RM5 for each 12 wild rice genotypes in 1.0% agarose gel strained with ethidium bromide. Three micro liter of PCR product was used in each sample	351
4.5.3	Amplification profile of primer RM234 and RM489for each 12 wild rice genotypes in 1.0% agarose gel strained with ethidium bromide. Three micro liter of PCR product was used in each sample	352

LIST OF FIGURES (Cont'd)

FIGURE NO.	TITLE	PAGE NO.
4.5.4	An UPGMA cluster dendrogram in neighbor format showing genetic relationships among 12 wild rice genotypes based on 6 SSR markers. Here cophenetic correlation coefficient (CP) value is 0.00-0.73 and G ₁ - <i>Oryza rufipogon</i> , G ₂ - <i>Oryza alta</i> , G ₃ - <i>Oryza longistiminata</i> , G ₄ - <i>Oryz abarthii</i> , G ₅ - <i>Oryza latifolia</i> , G ₆ - <i>Oryza officinalis</i> , G ₇ - <i>Oryza nivara</i> , G ₈ - <i>Oryza punctata</i> , G ₉ - <i>Oryza glaberima</i> , G ₁₀ - <i>Portericia coactata</i> , G ₁₁ - <i>Pokkali</i> and G ₁₂ - <i>Nonabokra</i>	352

LIST OF PLATES

PLATE NO.	TITLE	PAGE NO.
3.1.1	Determination of chlorophyll using SPAD meter	53
3.1.2	Measuring leaf area of wild rice genotypes using leaf area meter	53
3.1.3	Experimental view of morphological characterization of wild relatives of rice	54
3.2.1	Experimental view of physiological characterization of wild species of rice	64
3.3.1	A. Soil moisture determination during pot preparation using three-way moisture meter and B. Maintaining soil moisture at 40-45% field capacity using three-way moisture meter during drought stress experiment	67
3.3.2	General experimental view of screening of wild relatives of rice conferring to drought A. Early stage and B. Impact of drought stress	75
3.4.1	A. Collection of leaf samples for chlorophyll determination and water relation behavior B. Color developed during measuring of chlorophyll and carotenoids of rice genotypes	81
3.4.2	Determination of chlorophyll and carotenoids with a spectrophotometer	81
3.4.3	Experimental view of screening of wild relatives of rice conferring to salinity stress	82
3.5.1	DNA pellet of some representative wild rice genotype samples	85
3.5.2	Confirmation of genomic DNA sample	86
4.1.1	Different growth stages of <i>Oryza punctata</i> ; A. Germination of seeds, B. Primary tillering stage, C. Maximum tillering stage, D. Maturity stage and E. Grain of <i>Oryza punctata</i> with long awn	92
4.1.2	Different growth stages of <i>Oryza rufipogon</i> ; A. Germination of seeds, B. Primary tillering stage, C. Maximum tillering stage, D. Reproductive stage and E. Branching of tiller and F. Grain of <i>Oryza rufipogon</i> medium to long awn	93

LIST OF PLATES (Cont'd)

PLATE NO.	TITLE	PAGE NO.
4.1.3	Different growth stages of <i>Oryza alta</i> ; A. Seedling stage, B. Primary tillering stage, C. Maximum tillering stage and D. Dark color grain of <i>Oryza alta</i>	95
4.1.4	Different growth stages of <i>Oryza nivara</i> ; A. Germination of seeds, B. Primary tillering stage, C. Flowering stage, D. Maturity stage and E. Branching of tiller and F. Grain of <i>Oryza nivara</i> with awn	97
4.1.5	Different growth stages of <i>Oryza longistaminata</i> ; A. Germination of seeds, B. Primary tillering stage, C. Maximum tillering stage and D. Reproductive stage	99
4.1.6	Morphology of <i>Oryza longistaminata</i> with special features A. Branching of tiller, B. Rhizomatous root system and C. Seeds of <i>Oryza longistaminata</i> with/without medium to short awn	100
4.1.7	Different growth stages of <i>Oryza officinalis</i> ; A. Primary tillering stage, B. Maximum tillering stage, C. Panicle initiation and D. Maturity stage and E. Dark color small size seeds of <i>Oryza officinalis</i>	102
4.1.8	Different growth stages of <i>Oryza barthii</i> ; A. Germination of seeds, B. Seedling stage, C. Tillering stage and D. Flowering stage E. Grain filling stage F. Seed of <i>Oryza barthii</i> with gigantic awn	104
4.1.9	Different growth stages of <i>Oryza latifolia</i> ; A. Germination of seeds, B. Seedling stage, C. Primary tillering stage and D. Maximum tillering stage	106
4.1.10	Growth stage of <i>Oryza latifolia</i> with special character; A. Maturity stage, B. Branching of tiller, C. Leaf comparison between <i>O. latifolia</i> and BRRI dhan29 and D. Seeds of <i>Oryza latifolia</i>	107

LIST OF PLATES (Cont'd)

PLATE NO.	TITLE	PAGE NO.
4.1.11	Growth stage of <i>Porteresia coarctata</i> ; A. Primary tillering stage, B. Maximum tillering stage, C. Flowering stage and D. Rhizome root system	109
4.1.12	Growth stage of <i>Oryza glaberrima</i> ; A. Germination of seeds, B. Tillering stage, C. Flowering stage, D. Maturity stage E. Seeds of <i>Oryza glaberrima</i>	111
4.1.13	Seeds of different wild rice genotypes; A. Seeds of <i>Oryza punctata</i> , B. Seeds of <i>Oryza rufipogon</i> , C. Seeds of <i>Oryza alta</i> , D. Seeds of <i>Oryza nivara</i> , E. Seeds of <i>Oryza longistaminata</i> , F. Seeds of <i>Oryza officinalis</i> , G. Seeds of <i>Oryza barthii</i> H. Seeds of <i>Oryza latifolia</i> and I. Seeds of <i>Oryza glaberrima</i>	113

LIST OF APPENDICES

APPENDIX NO.	TITLE	PAGE NO.
I	The Map of the experimental site	429
II	The physical and chemical characteristics of soil of the experimental site as observed prior to experimentation (0-15 cm depth)	430
III	Monthly average air temperature, relative humidity and rainfall of the experimental site during the study period (March, 2018 to December, 2020)	431
EXPERIMENT 1		
I	Mean square value of plant height, leaves hill ⁻¹ , nodes plant ⁻¹ and chlorophyll content on leaves of wild rice as influenced by different genotypes	432
II	Mean square value of length of normal leaf, breadth of normal leaf, length breadth ratio of normal leaf and normal leaf area of wild rice as influenced by different genotypes	433
III	Mean square value of length of flag leaf, breadth of flag leaf, length breadth ratio of flag leaf and flag leaf area of wild rice as influenced by different genotypes	433
IV	Mean square value of length of root, root dry weight hill ⁻¹ , shoot dry weight hill ⁻¹ and total dry weight hill ⁻¹ of wild rice as influenced by different genotypes	433
V	Mean square value of days to 1 st flowering, growth duration, tillers hill ⁻¹ , effective tillers hill ⁻¹ and non-effective tillers hill ⁻¹ of wild rice as influenced by different genotypes	434
VI	Mean square value of panicle length, grains panicle ⁻¹ , filled grains panicle ⁻¹ and unfilled grains panicle ⁻¹ of wild rice as influenced by different genotypes	434
VII	Mean square value of 1000 grain weight, grain yield hill ⁻¹ , biological yield hill ⁻¹ and harvest index of wild rice as influenced by different genotypes	434

LIST OF APPENDICES (Cont'd)

APPENDIX NO.	TITLE	PAGE NO.
EXPERIMENT 2		
I	Mean square value of plant height of wild rice as influenced by different genotypes at different days after transplanting	435
II	Mean square value of normal leaf length, breadth, length breadth ratio, area of wild rice as influenced by different genotypes	435
III	Mean square value of flag leaf length, breadth, length breadth ratio, area of wild rice as influenced by different genotypes	435
IV	Mean square value of leaves hill ⁻¹ , nodes plant ⁻¹ , days to 1 st flowering and growth duration of wild rice as influenced by different genotypes	436
V	Mean square value of leaf area hill ⁻¹ of wild rice as influenced by different genotypes at different days after transplanting	436
VI	Mean square value of leaf area index of wild rice as influenced by different genotypes at different days after transplanting	436
VII	Mean square value of chlorophyll content on leaf of wild rice as influenced by different genotypes at different days after transplanting	436
VIII	Mean square value of shoot dry weight hill ⁻¹ , root dry weight hill ⁻¹ and total dry weight hill ⁻¹ of wild rice as influenced by different genotypes	437
IX	Mean square value of dry matter weight hill ⁻¹ of wild rice as influenced by different genotypes at different days after transplanting	437
X	Mean square value of crop growth rate of wild rice as influenced by different genotypes at different days after transplanting	437
XI	Mean square value of relative growth rate of wild rice as influenced by different genotypes at different days after transplanting	438

LIST OF APPENDICES (Cont'd)

APPENDIX NO.	TITLE	PAGE NO.
XII	Mean square value of net assimilation rate of wild rice as influenced by different genotypes at different days after transplanting	438
XIII	Mean square value of leaf area duration of wild rice as influenced by different genotypes at different days after transplanting	438
XIV	Mean square value of absolute growth rate of wild rice as influenced by different genotypes at different days after transplanting	439
XV	Mean square value of specific leaf area of wild rice as influenced by different genotypes at different days after transplanting	439
XVI	Mean square value of yield contributing characters of wild rice as influenced by different genotypes	439
XVII	Mean square value of yield contributing characters of wild rice as influenced by different genotypes	440
XVIII	Mean square value of yield characters of wild rice as influenced by different genotypes	440
EXPERIMENT 3		
I	Mean square value of growth characters of wild rice as influenced by different genotypes and drought stress	440
II	Mean square value of leaf characters of wild rice as influenced by different genotypes and drought stress	441
III	Mean square value of flag leaf characters of wild rice as influenced by different genotypes and drought stress	441
IV	Mean square value of growth characters and phenology of wild rice as influenced by different genotypes and drought stress	441
V	Mean square value of yield contributing characters of wild rice as influenced by different genotypes and drought stress	442
VI	Mean square value of yield contributing characters of wild rice as influenced by different genotypes and drought stress	442

LIST OF APPENDICES (Cont'd)

APPENDIX NO.	TITLE	PAGE NO.
VII	Mean square value of yield and yield contributing characters of wild rice as influenced by different genotypes and drought stress	442
VIII	Mean square value of water relation behavior of wild rice as influenced by different genotypes and drought stress	443
IX	Mean square value of biochemical traits of wild rice as influenced by different genotypes and drought stress	443
EXPERIMENT 4		
I	Mean square value of growth and phenological characters of wild rice as influenced by different genotypes and salinity stress	443
II	Mean square value of leaf characters of wild rice as influenced by different genotypes and salinity stress	444
III	Mean square value of flag leaf characters of wild rice as influenced by different genotypes and salinity stress	444
IV	Mean square value of growth characters of wild rice as influenced by different genotypes and salinity stress	444
V	Mean square value of yield contributing characters of wild rice as influenced by different genotypes and salinity stress	445
VI	Mean square value of yield contributing characters of wild rice as influenced by different genotypes and salinity stress	445
VII	Mean square value of yield characters of wild rice as influenced by different genotypes and salinity stress	446
VIII	Mean square value of water relation behavior of wild rice as influenced by different genotypes and salinity stress	446
IX	Mean square value of biochemical characters of wild rice as influenced by different genotypes and salinity stress	446

LIST OF ACCRONIMS

AEZ	=	Agro-Ecological Zone
BARI	=	Bangladesh Agricultural Research Institute
BRRI	=	Bangladesh Rice Research Institute
SPAD	=	The Soil and Plant Analyzer Development
ppm	=	Parts per million
<i>et al.</i>	=	And others
N	=	Nitrogen
TSP	=	Triple Super Phosphate
MP	=	Murriate of Potash
G	=	Gypsum
DAS	=	Days after sowing
ha ⁻¹	=	Per hectare
g	=	Gram
kg	=	Kilogram
q	=	Quintal
µg	=	Micro gram
SRDI	=	Soil Resources and Development Institute
HI	=	Harvest Index
No.	=	Number
Wt.	=	Weight
LSD	=	Least Significant Difference
°C	=	Degree Celsius
NS	=	Non significant
cm	=	Centimeter
mm	=	Millimeter
Max	=	Maximum
Min	=	Minimum
%	=	Percent
cv.	=	Cultivar
NPK	=	Nitrogen, Phosphorus and Potassium
CV%	=	Percentage of coefficient of variance
Hr	=	Hour
T	=	Ton
<i>viz.</i>	=	Videlicet (namely)
LAI	=	Leaf area index
CGR	=	Crop growth rate

LIST OF ACCRONIMS (Cont'd)

RGR	=	Relative growth rate
NAR	=	Net Assimilation Rate
LAD	=	Leaf area duration
AGR	=	Absolute growth rate
SLA	=	Specific leaf area
RWC	=	Relative water content
WSD	=	Water saturation deficit
WRC	=	Water retention capacity
WUC	=	Water uptake capacity
BINA	=	Bangladesh Institute of Nuclear Agriculture
BAU	=	Bangladesh Agricultural University
DAE	=	Department of Agricultural Extension
BBS	=	Bangladesh Bureau of Statistics
OA	=	Osmotic adjustment
OP	=	Osmotic potential
PCR	=	Polymerase chain reaction
SSR	=	Simple Sequence Repeat
RM	=	Random primers
UPGMA	=	Unweighted Pair Group Method with Arithmetic Averages
TBE	=	Tris-borate-ethylene
PIC	=	Polymorphism Information Content
AGE	=	Agarose gel electrophoresis
LSD	=	Least Significance difference
RDRS	=	Rangpur Dinajpur Rural Service
